Alternative On-demand Service network

Advantages

- Efficient way to offer public transit in areas with few riders
- Can reallocate resources to serve more riders
- Connection to frequent service

What's different?

- Route 4 & 6 are proposed to be replaced with alternative on-demand service
- Riders will be picked-up and taken to a nearby transfer hub where they may transfer onto the regular fixed-route network without extra charge
- Based on demand, opportunities for expansion will be considered (Parkdale area)
